CubToken White Paper

Version 2.0 – Solana Integration & Ecosystem Expansion
Last Updated: October 2025

Executive Summary

CubToken is a multi-chain cybersecurity asset designed to bridge Web2 and Web3 through secure infrastructure, locked liquidity, and real-world impact. Originally launched as an ERC-20 token, CubToken now operates across Ethereum, Binance Smart Chain (BSC), Polygon, and Solana. With a private donor network, grant-powered humanitarian outreach, and a decentralized ecosystem, CubToken is redefining blockchain utility and integrity.

Vision

To build an integrity-based digital empire that empowers financial freedom, cybersecurity, and social good—one block, one meal, one future at a time.

Problem Statement

Most crypto projects lack long-term value, transparency, and real-world utility. CubToken solves this by combining locked liquidity, cybersecurity protocols, and humanitarian impact through a grant-driven model and multi-chain infrastructure.

Ecosystem Overview

CubToken anchors a growing suite of decentralized tools:

- **CubYield (Layer 3 BEP-20)**: Yield on principle
- **CubDex**: Decentralized exchange protocol
- **CubAI**: Private AI network
- **CubMetaverse**: Immersive digital experience
- **Cub21 Utility**: Developer incentives

- **Solana Integration**: High-speed, low-cost scalability

Solana Integration

CubToken is now live on Solana, fully compliant with SPL token standards and Metaplex metadata protocols.

Solana Contract Address:
`3BePteqPg8XceYdfKJvLoKWZWKKZq6F9aaoL84ipg9SD`

Metadata Compliance:

- `name`: CubToken
- `symbol`: CUBT
- `image`: https://cubtoken.com/wp-content/uploads/2021/08/CUBTOKEN-ct-1.png
- `description`: Cybersecurity-focused multi-chain token with grant-based social impact

CubToken uses Metaplex's Token Metadata Program to ensure wallet visibility and dApp compatibility across Solana's ecosystem.

Tokenomics

CubToken's supply is strategically locked to ensure trust and long-term stability:

Allocation	Percentage	Description
Locked Forever	66%	Immutable contract lock
Development Treasury	28%	Ecosystem growth and innovation
Fintech Partner Allocation	3.62%	Strategic third-party integrations
Circulating Supply	2.38%	Available for public trading

Total Supply: 6,643,753,515,967 CUBT
Locked Tokens: ~4.39 trillion CUBT

Private Donor Network

CubToken is building a **private network of qualified donors** to bridge Web2 and Web3:

- Vetted contributors from traditional finance and blockchain
- Multi-chain grant support (BTC, ETH, BSC, SOL, USDT)
- Transparent smart contracts with audit trails
- 90% of grants fuel innovation; 10% feed the homeless

This hybrid model creates a self-sustaining liquidity engine that powers CubToken's expansion and social mission.

Grant Program

CubToken's Ethereum-based grants offer tiered impact:

Grant Tier	Amount	Meals Provided	Purpose
Starter Pack	$100	1	Entry-level support
Community Builder	$1,000	10	Local impact
Visionary	$10,000	100	Ecosystem growth
Innovator	$50,000	500	Infrastructure and liquidity
Legacy Maker	$250,000	2,500	Permanent legacy and expansion

Cybersecurity Features

- **Transaction Pausing**: Blocks unauthorized Ethereum transactions
- **Multi-chain Monitoring**: Real-time alerts across Solana, BSC, and ETH
- **Partner Vetting**: Rigorous qualification for network participants

---

SEO Utility

CubToken is a search-optimized brand designed for visibility across Web2 and Web3:

- Backlinks from CoinGecko, Etherscan, Solscan, Forbes, and major exchanges
- Keyword-rich content across white papers, blogs, and social platforms
- Indexed metadata across Ethereum, Solana, BSC, and Polygon
- Organic traffic from investors, developers, and media outlets

This SEO strategy drives discoverability, credibility, and long-term brand equity.

Roadmap

Q4 2025

- Solana launch and metadata compliance
- CubDex protocol rollout
- Grant expansion and NFT integration

Q1 2026

- CubAI private net deployment
- CubMetaverse beta
- Polygon liquidity bridge

Q2 2026

- Institutional onboarding
- Cub21 developer incentives
- Global grant expansion

Governance

CubToken operates under a hybrid governance model:

- **Core Team**: Strategic decisions and treasury oversight
- **Donor Council**: Grant allocation and impact tracking
- **CubTeam Voting**: Feature prioritization and roadmap input

---

Legal & Compliance

CubToken complies with:

- **Solana SPL token standards**
- **Metaplex metadata protocols**
- **ERC-20 and BEP-20 smart contract best practices**
- **KYC/AML screening for grant contributors where applicable**

All grant contributions are tracked via smart contracts with transparent audit trails.
